NEXT CHAPTER @ SMITH PUBLIC LIBRARY

Numbers You Already Know

Session 2 — Math Part A: Whole Numbers, Fractions, Decimals & Percentages

Monday Evenings • 5:30–7:30 PM • Library Conference Room

Tonight's Agenda

1	Welcome & why math anxiety is normal	*10 min*
2	Order of operations: concept + guided practice	*30 min*
3	Fractions, decimals, percentages: same number, three costumes	*20 min*
4	Conversion practice: guided problems	*30 min*
5	Worked example together	*15 min*
6	Wrap-up & take-home preview	*15 min*

Let's Name It: Math Anxiety Is Real

You already use math every day.

Making change, doubling a recipe, figuring out a discount — that's all math you already do.

We're not starting from zero.

Tonight builds on real number sense you already have, just with new labels.

Stuck is normal, not shameful.

If something doesn't click tonight, that's exactly what Thursday office hours are for.

Order of Operations

PEMDAS: the order matters.

Parentheses → Exponents → Multiply/Divide → Add/Subtract

Example: $12 + 8 \times 3$

Multiply first: $8 \times 3 = 24$

Then add: $12 + 24 = 36$

Your Turn: Try These

GUIDED PRACTICE

1. $8 + 4 \times 2 = ?$
2. $(6 + 2) \times 3 = ?$
3. $20 - 6 \div 2 = ?$
4. $5 + 3^2 = ?$

Let's Check Your Answers

1. $8 + 4 \times 2 = 8 + 8 = 16$

2. $(6 + 2) \times 3 = 8 \times 3 = 24$

3. $20 - 6 \div 2 = 20 - 3 = 17$

4. $5 + 3^2 = 5 + 9 = 14$

Same Number, Three Costumes

Fractions, decimals, and percentages are just different outfits for the same value

1/2	0.5	50%
Fraction	**Decimal**	**Percentage**

They're all exactly halfway between 0 and 1.

Fraction → Decimal: Divide top by bottom: 3/4 = 0.75

Decimal → Percentage: Move decimal 2 right: 0.75 = 75%

Your Turn: Convert These

GUIDED PRACTICE

1. Write 3/5 as a decimal.
2. Write 0.6 as a percentage.
3. Write 80% as a decimal.
4. Write 0.125 as a fraction.
5. Write 1/8 as a percentage.

Let's Check Your Answers

1. $3/5 = 3 \div 5 = 0.6$
2. 0.6 → move decimal right → 60%
3. 80% → move decimal left → 0.8
4. $0.125 = 125/1000 = 1/8$
5. $1/8 = 0.125$ → 12.5%

Let's Solve One Together

A shirt is marked 25% off. The original price is $40. What's the sale price?

Step 1: Find 25% of $40 → 0.25 × 40 = $10

Step 2: Subtract the discount → $40 − $10 = $30

Sale price: $30

Before You Go

Try tonight's take-home practice

Real practice questions on tonight's material — 10 minutes, any time this week.

Thursday office hours are open

If conversions didn't click tonight, this is the place to ask.

Next week: more Math

Ratios and percentage applications — building on tonight.

You Just Did Real Math.

See you next Monday — ratios and percentage applications.

Before next week:
Try tonight's take-home practice. Want more? GED.com's free test preview tutorials (tools.ged.com) are always open, in English or Spanish.
