

NEXT CHAPTER @ SMITH PUBLIC LIBRARY

Your Results, Your Roadmap

Session 2 — Diagnostic Debrief & Study Skills

Monday Evenings • 5:30–7:30 PM • Library Conference Room

Tonight's Agenda

1

Welcome back & quick recap

10 min

2

Understanding your diagnostic results

25 min

3

Goal-setting worksheet

20 min

4

Study skills that actually work

25 min

5

Computer-based testing walkthrough

25 min

6

Preview: Math starts next week

5 min

Quick Recap: Last Week

You showed up.

That's the hardest part of any new program — and you already did it once.

You took the diagnostic.

Every subject, no pressure, just to see where you're starting from.

You met your classmates.

You're not doing this alone — the same people will be here tonight.

Understanding Your Results

This is not a grade.

Your results sort into three bands per subject — they just tell us where to spend our time together.

Foundational: we'll build from the ground up together.

Developing: you've got real groundwork — we'll build on it.

Strong Start: you're ready to move quickly through this subject.

Let's Set Your Goal

Open the take-home tool's Goals tab and fill this in together

Why are you here?

One honest sentence — a job, your kids, yourself. Write it down.

When do you want to finish?

Pick a real month. It doesn't have to be perfect — it just has to exist.

A goal you can see is a goal you can hit. We'll check back in on this all year.

Study Skills That Actually Work

Take Notes By Hand

Writing things out — even messy — helps it stick better than typing or just listening.

Spread It Out

20 minutes a few nights a week beats one long cram session. Little and often wins.

Use Office Hours

Thursday nights are built for exactly this — stuck on something? Don't sit with it all week.

The GED Is Taken on a Computer

Tonight we'll practice the basics — no pressure, just getting comfortable

Clicking to Select

Choosing answers, navigating between questions.

Typing Answers

Short answers and essay responses, typed directly.

On-Screen Calculator

Built into the test — we'll practice this specifically in the Math block.

Moving Between Screens

Flagging questions to revisit, checking your progress.

Let's Try It Together

Open your device, log in, and click through a few practice questions — we'll walk through it as a group.

Next Week: Math Begins

Numbers & Percentages

Order of Operations

Ratios in Real Life

4 Weeks, Building Up

Before You Go

Finish your Goals tab

If you didn't finish writing your goal tonight, do it before Thursday.

Thursday office hours are open

Come with any question — about tonight or anything else.

Try the take-home practice

10 minutes, any time this week — it's the same format we practiced tonight.

You Know Where You're Starting.

See you next Monday — Math starts, one small step at a time.

Before next week:

Finish your Goals tab and try 10 minutes of take-home practice. Want more? GED.com's free test preview tutorials (tools.ged.com) are always open, in English or Spanish.
